

## IN THE CLAIMS:

1. (Currently Amended) A sunroof for a vehicle, comprising:  
a sunroof frame mounted between a roof panel and a head liner;  
an opening/closing mechanism mounted at opposed lateral surfaces of said sunroof frame;  
a support rail capable of being opened and closed by said opening/closing mechanism;  
and  
a decoration cover coupled to a lateral surface of said support rail, wherein said decoration cover has a predetermined length and height configured and dimensioned for concealing said opening/closing mechanism.
2. (Original) The sunroof of claim 1, wherein said decoration cover comprises:  
a body frame for covering a gap between said sunroof frame and said support rail to conceal said opening/closing mechanism; and  
at least one fixation part connected to said body frame for attaching said body frame onto a lateral surface of said support rail.
3. (Original) The sunroof of claim 2, further comprising at least one rib located on said body frame and connected at a distal end of said body frame.
4. (Original) The sunroof of claim 2, wherein said at least one fixation part includes a first fixation part extending out from an upper portion of said body frame for being inserted onto the lateral surface of said support rail.
5. (Original) The sunroof of claim 4, wherein said first fixation part is configured to snap onto the lateral surface of said support rail.
6. (Original) The sunroof of claim 5, wherein said first fixation part includes a snap connector having a barb.
7. (Original) The sunroof of claim 2, wherein said at least one fixation part includes a second fixation part formed with upper and lower clips extending out from an upper portion of said body frame for receiving a lateral surface of said support rail.

8. (Original) The sunroof of claim 2, wherein said at least one fixation part includes a first fixation part located adjacent a second fixation part.
9. (Currently Amended) ~~The sunroof of claim 2,~~ A sunroof for a vehicle, comprising:  
a sunroof frame mounted between a roof panel and a head liner;  
an opening/closing mechanism mounted at opposed lateral surfaces of said sunroof  
frame;  
a support rail capable of being opened and closed by said opening/closing mechanism;  
and  
a decoration cover coupled to a lateral surface of said support rail, wherein said  
decoration cover has a predetermined length and height for concealing said opening/closing  
mechanism, and comprises:  
a body frame for covering a gap between said sunroof frame and said support  
rail to conceal said opening/closing mechanism; and  
at least one fixation part connected to said body frame for attaching said body  
frame onto a lateral surface of said support rail, wherein said body frame includes a border,  
and said rib is formed inside said border and is wavy.
10. (Currently Amended) A decorative cover for concealing an opening/closing mechanism located between a sunroof frame and a panel support rail in a vehicle, said decorative cover comprising:  
a body frame having a predetermined length and height configured and dimensioned for concealing the opening/closing mechanism; and  
at least one fixation part for connecting said body frame onto a lateral surface of the panel support rail.
11. (Original) The decorative cover of claim 10, wherein said at least one fixation part includes a first fixation part configured to snap onto a lateral surface of the panel support rail.
12. (Original) The decorative cover of claim 11, wherein said at least one fixation part includes a second fixation part including upper and lower clips spaced apart to receive a lateral surface of the panel support rail.
